<b>October - December, 2023</b> <b>XIV-VOLUME/IV-Issue</b>  <b>The benefits of vermicomposting in enhancing soil nutrients and promoting sustainable crop production</b>	<p>In the process of vermicomposting, earthworms turn organic waste into finely broken-down material, called vermicompost, which resembles peat. The fact that vermicompost is an environmentally benign process that turns a wide range of organic residues into useful agricultural inputs is becoming more widely known. When applied, vermicompost is a great source of humus and plant nutrients that enhance the soil's natural organic matter, physico-chemical and biological characteristics.</p>	<p>200 Copies (each) and circulated to all EIACP Centres, MoEF&amp;CC Change, New Delhi.</p>	<a href="https://dste.pv.gov.in/Evispdv/assets/pdf/Newletter/2023/Oct%20-%20Dec%202023.pdf">https://dste.pv.gov.in/Evispdv/assets/pdf/Newletter/2023/Oct%20-%20Dec%202023.pdf</a>	
<b>January - March, 2024</b> <b>XV-VOLUME/I-Issue</b>  <b>Mangroves: Planting Hope To Combat Climate Change</b>	<p>Mangroves are a unique type of vegetation found in intertidal areas where freshwater and saltwater combine. These salt-tolerant plants are commercially and environmentally significant, protecting coastal areas from tsunami storm surges and soil erosions. Their complex root systems dissipate sea wave energy, arresting coastal erosion and seawater pollution. Sediment deposition is a visible feature that arrests coastal erosion and seawater pollution.</p>		<a href="https://dste.pv.gov.in/Evispdv/assets/pdf/Newletter/2024/Jan%20-%20Mar%202024.pdf">https://dste.pv.gov.in/Evispdv/assets/pdf/Newletter/2024/Jan%20-%20Mar%202024.pdf</a>
