State of Environment & Related Issues in Puducherry

ENVIS HUB NEWSLETTER

WATER BODIES (PONDS) IN THE U.T. OF PUDUCHERRY

Volume IX-IV

Oct – Dec, 2018

**Sponsored by
Ministry of Environment, Forest & Climate Change
Government of India,
New Delhi.**

**Puducherry ENVIS Hub sincerely thank Local Administration Department,
Municipalities, Commune Panchayats in the
U.T. of Puducherry for sharing relevant information**

Introduction

The Union Territory of Puducherry consists of four constituent regions – Puducherry, Karaikal, Mahe and Yanam. Although all the four are coastal areas, the water resources issues in each of these regions are different because the usage pattern varies from region to region. There are 712 ponds present in the Union Territory to ensure rain water storage and to recharge groundwater level. Ponds also support other livelihood activities including fisheries and livestock rearing. These shallow water bodies are abandoned in most of the cases and as a result they are vulnerable to pollution due to urbanisation, shallow depth and distinctive hydrology. Ponds available in the U.T. of Puducherry would be de-silted for rain water harvesting in a phased manner. This de-silting activity would restore the existing ponds and other small water bodies and can be utilized for rainwater harvesting. This would also result in water conservation and help in minimizing ground water depletion and environment protection.

Definition of Ponds:

Biggs et al., (2005) described ponds as water bodies with an area between 1 square metre and 2 hectares (20,000 square metres), which may be seasonal or permanent, including both natural and man-made water bodies.

International Ramsar Wetlands Convention sets 8 hectares as the upper limit of the water body to classify as a pond; some regions of the United States classify pond as a surface water body having surface area less than 10 acres (\approx 40,000 square metres); and many European Biologists adopt upper limit of pond as 5 hectares.

Formation of ponds

Any depression in the ground area which collects and retains a sufficient amount of precipitation can be considered a pond, and such depressions can be formed by a variety of geological and ecological events. Landscape area contains small depressions which form temporary ponds during rainy seasons; these are called vernal ponds, and may be important sites for amphibian breeding. Beaver ponds are created by animals.

Ponds as biodiversity hotspots

Ponds play a vital role for the survival of biodiversity hotspots as refuges for both terrestrial and aquatic organisms (European Communities (1994). Ponds support a large number of biodiversity and biota represent almost all taxonomy of recognized fresh water taxonomy (Biggs et al., 1994, Oertli et al., 2002, Vrema et al., 1987). The ponds have wide range of endangered and unique species including phytoplankton, amphibians, aquatic plants and animals (Beebe 1992, Grillas et al., 2004, Scheffer et al., 2006 & Williams et al., 2004).

Ponds are common landscape elements which play important role in the global processes of biosphere and preservation of biodiversity (Miracle et al., 2010). Researchers have ascertained that ponds are important biodiversity hotspots both in relation to species composition and biological traits, and they play significant role in terms of providing ecosystem services (Cereghino et al., 2014).

Threats to Ponds:

Pond eco system have significant ecological function and recognized social and economic uses. Human activities threatening the pond ecosystem includes increasing human population, land use pattern, urbanization, over exploitation, improper use of resources causing negative impact on wild animals, nutrient loading, illegal capturing, climate changes and invasion of exotic species (Agarwal, 2011 & Bronnmark et al., 2005). The degradation of ecosystem and biodiversity causes decline in their ability to provide resilience to the biosphere. This leads to biotic communities and human health to suffer. Human induced development activities can deteriorate a pond's value and quality due to accumulation of toxic chemicals and sedimentation rendering the use of ponds ineffective and risky.

Conservation and management of ponds

Ponds are being small and it is easily disrupted by human activity, such as hikers. The ponds are very useful to the cattle however, overgrazing and wading can turn a pond into a muddy hole. Nutrient sources such as fertilized pastures, human sewage, and even lawn fertilizer can cause explosive growth of algae and the loss of rooted plants and many other aquatic species. Roads near ponds can kill large numbers of amphibians and turtles that may migrate to and from the pond as part of their annual breeding cycle. Many well-intentioned people introduce fish to ponds, being unaware that some species may eat aquatic plants, stir up sediment, and eat the young of amphibians and many other invertebrate species. The ponds also provides an expanse of habitat for wetland plants and wet meadows. The construction of retaining walls, or lawns, can severely degrade the life in a pond.

In landscapes, where ponds are artificially constructed, they are done so to provide wildlife viewing opportunities, to treat wastewater, or for aesthetic purposes. In general, gently sloping shorelines with broad expanses of wetland plants not only provide the best conditions for wildlife, but they help protect water quality from sources in the surrounding landscapes. Roads and houses should be kept as far away as possible (Canadian Wildlife Service, 2004).

Indicative Guidelines for Restoration of Water Bodies

Central Pollution Control Board, Government of India, New Delhi has published the Indicative Guidelines for Restoration of Water Bodies (Polluted Lakes, Ponds and Rivers) in compliance to Hon'ble NGT Order dated 10.05.2019 in M.A.No. 26/2019 in OA.No. 325 of 2015. Indicative Guidelines for Restoration of Water Bodies can be seen at: <https://cpcb.nic.in/openpdffile.php?id=UmVwb3J0RmlsZXNmVODkwXzE1NjAxNjU0NTFfbWVkaWFwaG90bzE2MDQxLnBkZg==>

Training programme on “Pollution Monitoring: Air and Water Pollution” under Green Skill Development Programme (GSDP)

Training programme on “Pollution Monitoring: Air and Water Pollution” under Green Skill Development Programme (GSDP) at level- 6 was conducted by Puducherry Envis Hub Centre, Puducherry Pollution Control Committee at Dr. Abdul Kalam Science Centre and Planetarium, Lawspet, Puducherry. The training programme for a period of 38 working days (11th September to 26th October 2018, 260 hours) and the training module included theoretical, practical, field visits and assignments.

Puducherry Environment News Report

Officials check vehicles for violation of emission norms

SPECIAL CORRESPONDENT

Officials are checking vehicles for violation of emission norms. The image shows three men in uniform standing next to a blue car, with one man using a device to check the engine. The car's license plate is TN 11AD5801.

Officials carry vehicles under control certificate

The Transport Department has issued a control certificate to a vehicle for checking under the Motor Vehicle Act, 1988. The certificate is valid for 12 months from the date of issue.

The certificate is issued to the vehicle owner, who is responsible for ensuring that the vehicle is in good condition and complies with the emission norms. The certificate is valid for 12 months from the date of issue.

48 cases registered for defying SC cracker order

REPORTER

48 cases registered for defying SC cracker order. The image shows a large fire or explosion, likely related to the cracker ban. The text mentions that 48 cases were registered for defying the SC cracker order.

The number of cracker sales had come down by nearly 75% when compared with the previous year. The remaining shops also had less customers with people preferring crackers with less smoke and low decibel levels. The open space situation was having cracker sales within the permitted slot was only attract to some, a reader said.

A Municipal official said that most of the shops in the city were closed with some crackers and houses and the total waste had increased by nearly 40%. Through municipal workers were working round-the-clock, solid waste had increased after Dussehra, he added.

In more than 400 tonnes of solid waste is generated in some falling within the Outpost municipality on Wednesday as against the daily average of 350 tonnes, the official said.

Cracker sales in the past, there were no major incidents of fire. Hospitals reported only a very few cases of minor burn injuries. The Puducherry Pollution Control Committee was evaluating the data collected from various places to measure the quality of air on Dussehra day.

In Cuddalore district, as many as 10 cases were registered for burning crackers beyond the time slots prescribed by the Supreme Court.

Supreme Court Allows Bursting Of Crackers For Any 2 Hours On Dussehra In Tamil Nadu, Puducherry

IN A plea to the Supreme Court, the Tamil Nadu government requested to allow the state to burst crackers on Dussehra morning from 4.30 AM to 6.30 AM besides the already permitted slot of 8 PM to 10 PM.

Our Solution, Durali Special, News, Tamil Nadu

Written By: Anitha Ahuja | Edited By: Sonika Bhoskar
October 30, 2018 3:22 PM

New Delhi: On Tuesday, hearing to the Tamil Nadu government's plea of allowing the state to burst crackers on Dussehra morning (4.30 AM to 6.30 AM) besides the already permitted slot (8 PM to 10 PM), considering religious practices in the state, the Supreme Court modified its decision of October 22 and said the timings will be changed, but they won't exceed two hours a day. The state government is allowed to decide the two-hour slot. The timings will be changed in Puducherry as well. The Supreme Court also cleared its decision of October 23 where the bench stayed the order of ban on bursting of fireworks and used only 'green fireworks', the one with low decibels and described levels will be allowed. The Supreme Court said, decision of green fireworks was meant for Delhi-NCR and not PUN India. The permission to burst fireworks between 8 PM to 10 PM on the day of Dussehra was PUN India.

SC timings for bursting firecrackers in TN and Puducherry will change, not exceed two hours

THE TIMES OF INDIA

NEW DELHI: The Supreme Court Tuesday modified its order fixing a slot of 8 pm to 10 pm for bursting firecrackers on Dussehra and said the timing will be changed in places like Tamil Nadu and Puducherry but not exceed two hours a day.

A bench comprising Justices A.K. Sikri and Adesh Bhaskar also observed that the decision for permitting the use of green crackers was meant for the Delhi-NCR region and was not for India.

The apex court was hearing several applications filed by the Tamil government and firecracker manufacturers seeking modification and clarification of its October 23 order.

On Monday, the Tamil Nadu government urged the apex court to allow firecrackers to be burst on Dussehra morning in accordance with religious practices in the state, besides the already permitted 8 pm to 10 pm period.

The counsel appearing for firecracker manufacturers told the court that it was not possible to come up with green crackers in India since there was no set composition for manufacturing them.

Pondy government medical college gets notice for polluting lake

THE TIMES OF INDIA

PONDY: Pond government medical college gets notice for polluting lake

PUDUCHERRY: The Puducherry Pollution Control Committee (PPCC) has issued a notice to Pondy Government Medical College and Research Institute for discharging untreated effluents into a water body in the Union territory.

Committee member secretary B. Srinivas, also director, biotech, technology, and environment, said the committee issued the notice during a meeting that the committee had instructed the government society, which runs the college, to install a effluent treatment plant.

The society has been instructed to install the facility within a stipulated time. Srinivas said, explaining the industries that have been undertaken by the committee.

She said 77 of the 78 industries and institutions near their effluents property before discharging while the Pondy government medical college is the only institution that has been discharging untreated effluents.

The college has been discharging untreated effluents into Kangey Lake polluting the water body.

Best decided to hold a meeting with the officials concerned including the authorities to the government to follow appropriate efforts to prevent the college from discharging untreated effluents into the water body.
